MOUNTING TEMPLATE

Place perforation on turntable spindle, 3012 for 12" or 3009 for 9" effective length pick-up arms. Swing template to most convenient position, allowing sufficient clearance for balance weights (see table). Keep template flat and pass a long needle vertically through centre point A into motor board, Figure 1. Disengage spindle and lower template onto motor board using the needle as a guide, Figure 2. Spike through centre points B and four $\frac{3}{4}$ " holes. Remove template and drill two $1\frac{1}{8}$ " holes. Cut away area indicated by shading to form a slot.

Figure 1

Figure 2

Pick-up arm Model	Clearance Radius
Series II 3012	3¼" 83mm.
Series II 3009	
Model 3012-R	
Model 3009-R	2¾" 70mm.
Series III	2½" 64mm.
Series IIIS	2⅛" 54mm.
Series II Imp.	2" 51mm.
Series II S2 Imp.
